

Unvented MegafloHE

Megaflo is the brand leader in unvented domestic water heating.

In addition to the basic advantages of [unvented systems](#), NEW high efficiency Megaflo HE offers a number of features that place it well ahead of the competition in terms of performance, quality and reliability.

The NEW high efficiency Megaflo HE now boasts numerous innovative features designed to ensure superior levels of operating efficiency, delivering even more hot water – just when you need it!

Thanks to the high-performance 'coil in coil' heat exchanger; more hot water is available quicker than ever before.

Heatrae Sadia's Specification Advice Team is on hand to discuss requirements for specific projects, applications and product selection.

Features

Internal air-gap with patented floating baffle

Strong, Duplex stainless steel construction

High performance 'coil-in-coil' heat exchanger

No sacrificial anode (eliminates need for annual inspection)

Appliance-like plastic-coated outer case

Patented cold water inlet diffuser minimises mixing of cold and hot water

Water inlet controls increase flow rates by up to 35%

Improved performance even at 1 bar

Every unit tested to 15 bar (217psi)

25-year transferable cylinder guarantee

½" temperature and pressure relief valve

Guarantee stated here applies to UK installations only. For details of guarantees in other countries, please consult your local supplier.

Unvented
MegafloHE
SystemFit

Designed to reduce significantly on-site installation time. These factory assembled units are pre-plumbed and pre-wired with Danfoss central heating controls, pump, automatic by-pass valve and balancing valve.

This time saving Megaflo HE package not only speeds installation but significantly enhances the quality and integrity of the central heating system thus eliminating on-site defects and costly call backs.

Features

Megaflo HE - the UK's No. 1 unvented cylinder
125 & 145 litre capacities with 22mm primary connections
170, 210, 250 & 300 litre capacities with 28mm primary connections.
Danfoss TP9 Controls (S Plan configuration only)
No maintenance three speed circulating pump
Automatic by-pass valve for system efficiency
Load balancing valve for indirect coil efficiency
Connections for vented and unvented heating primaries
Patented cold water inlet diffuser minimises mixing of cold and hot water
